

A closer look. A clearer record.

A local workspace for calibrated image measurements and review notes. From the first inspection to an exportable record.

Actual application interface. Synthetic image and illustrative scale.

01

Calibrate

Connect a known distance to the image pixels. Keep the original coordinates.

02

Inspect & review

Measure distances and angles. Add context and mark findings reviewed.

03

Take it with you

Export measurements as CSV, back up the workspace or print a report.
